Site Audit Pro

PLATFORM

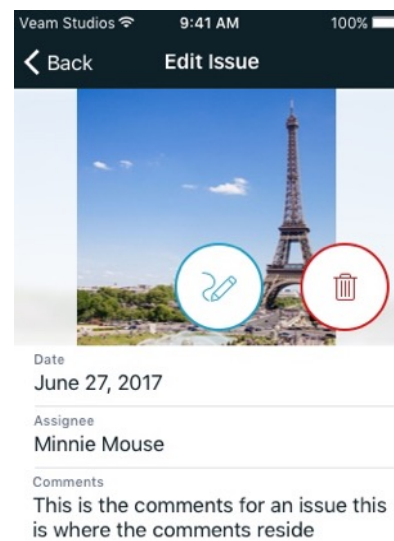

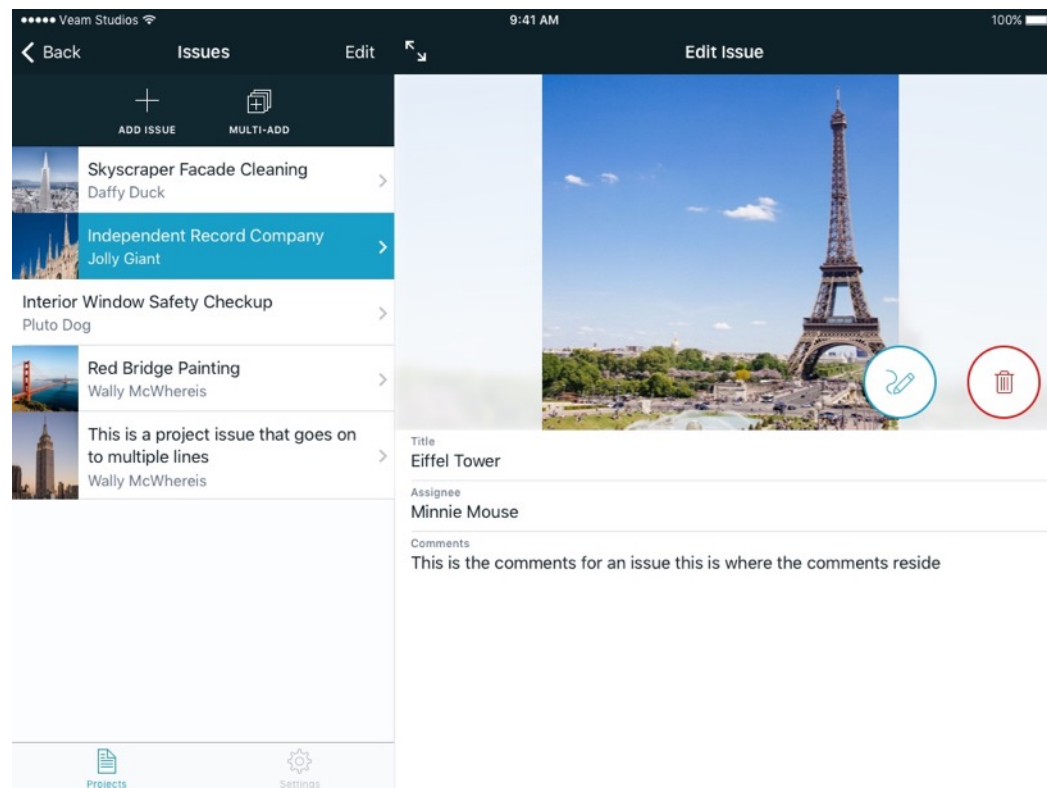

iOS, Android

CHALLENGES

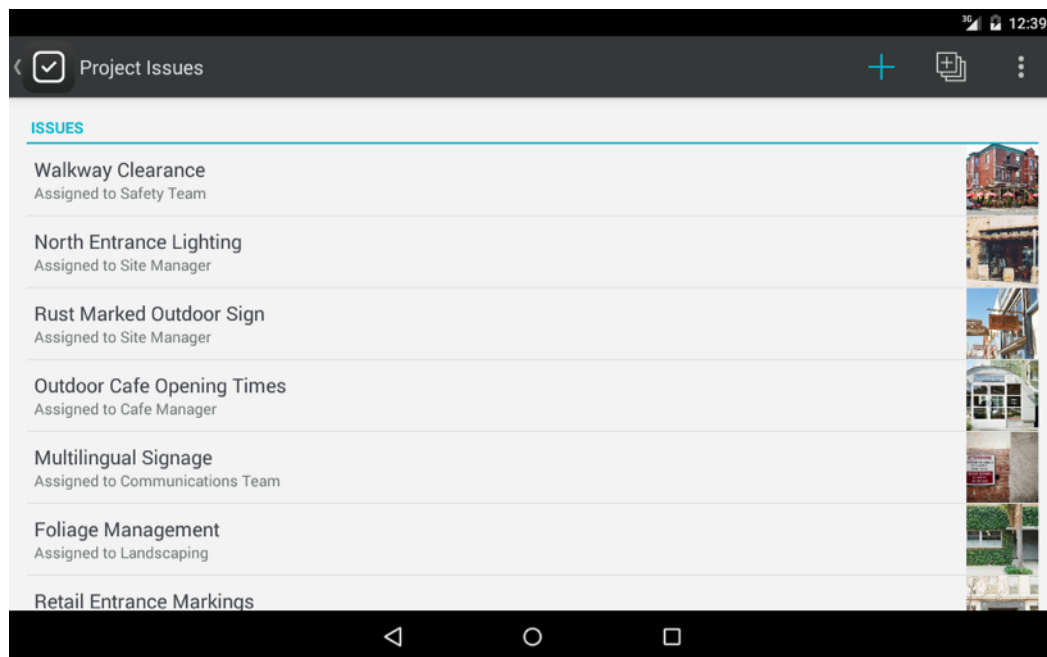

- Develop a product already in use by thousands of professionals for essential daily work.
- Maintain a focus on developing a user-focused design whilst adding new features and meeting business goals, all working within very limited budgets.
- Work as the sole designer handling all aspects of concept generation, design development, implementation and maintenance for a popular Business-to-Consumer app.

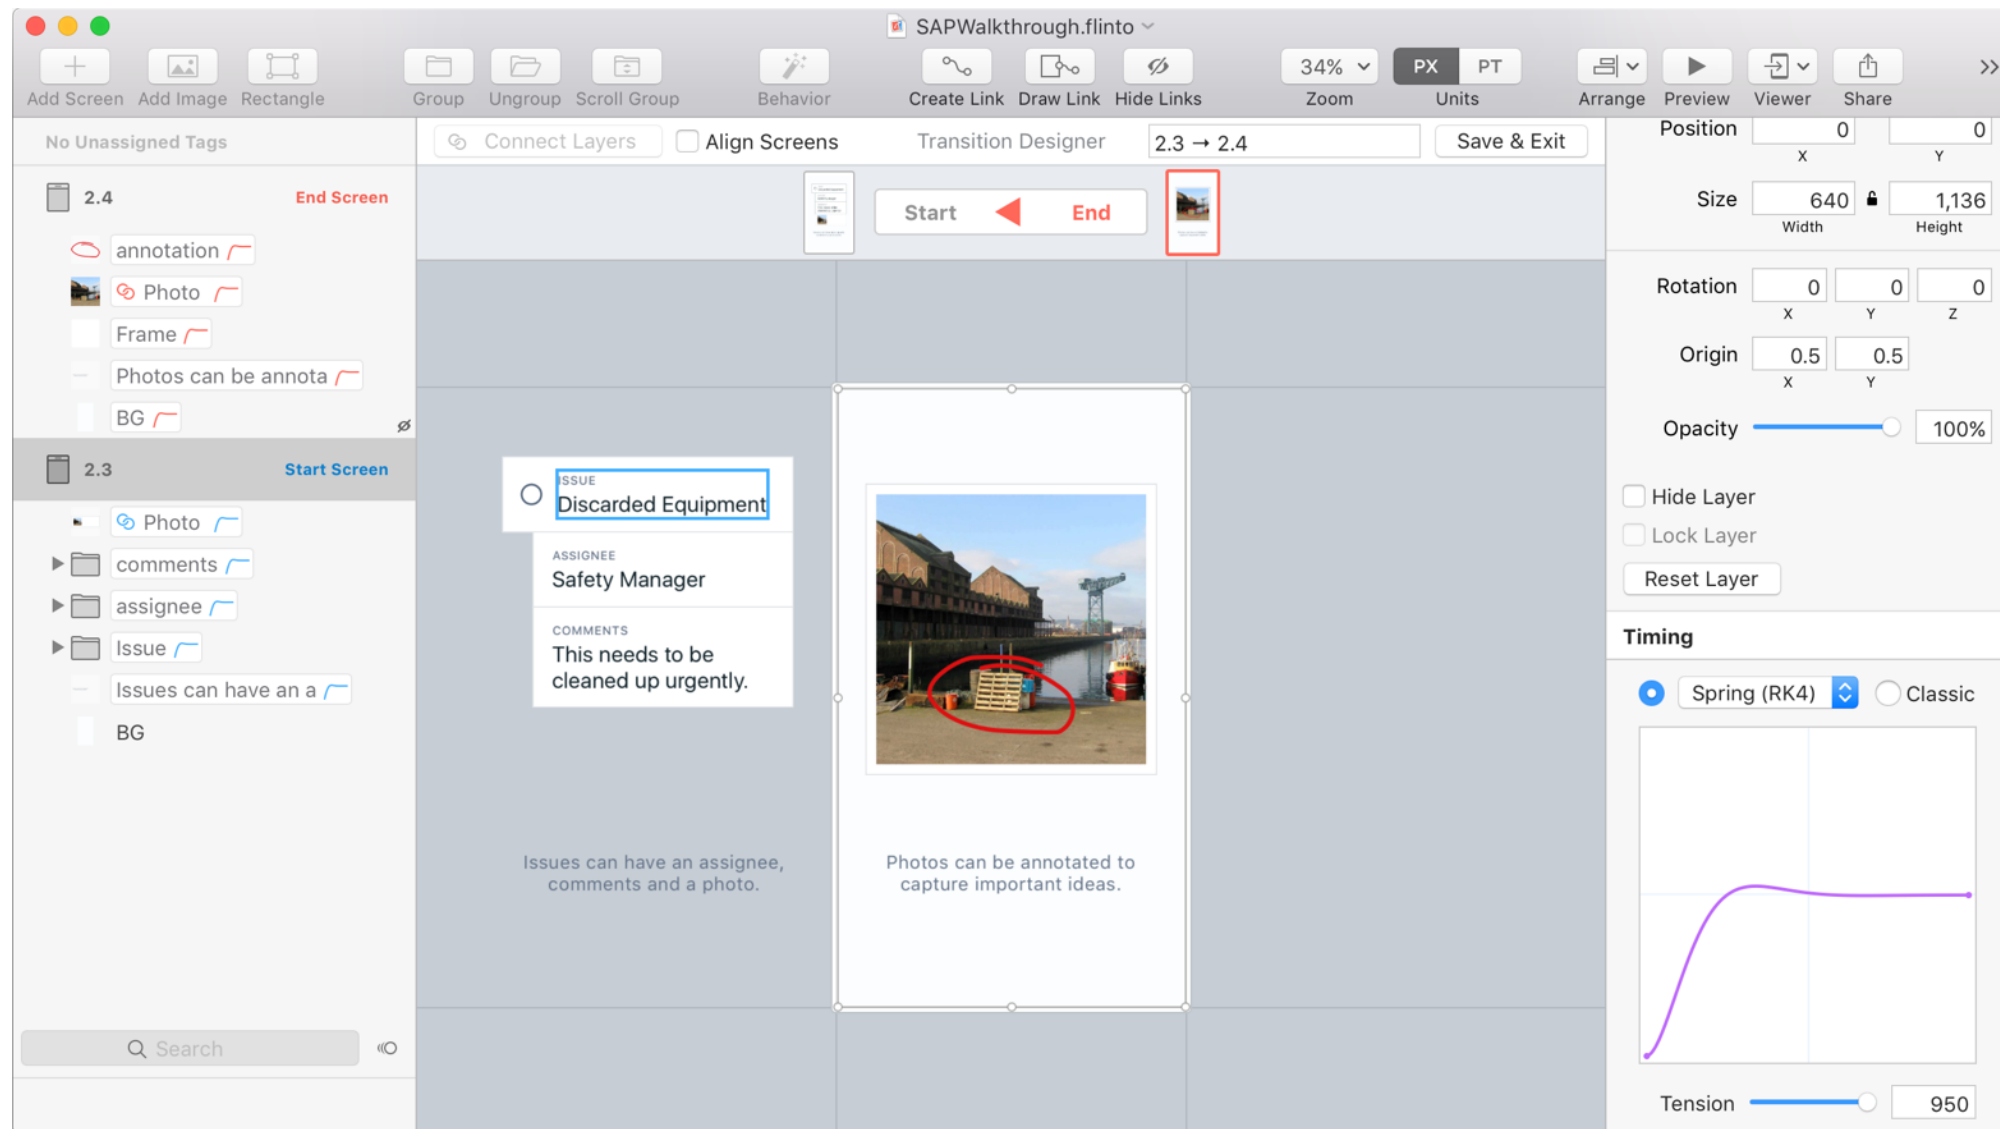

Joe Cooper - Selected Works

I worked on Site Audit Pro through many iterations, adding features and improving user experience from iOS 4 to iOS 10, as well as extending to Android.

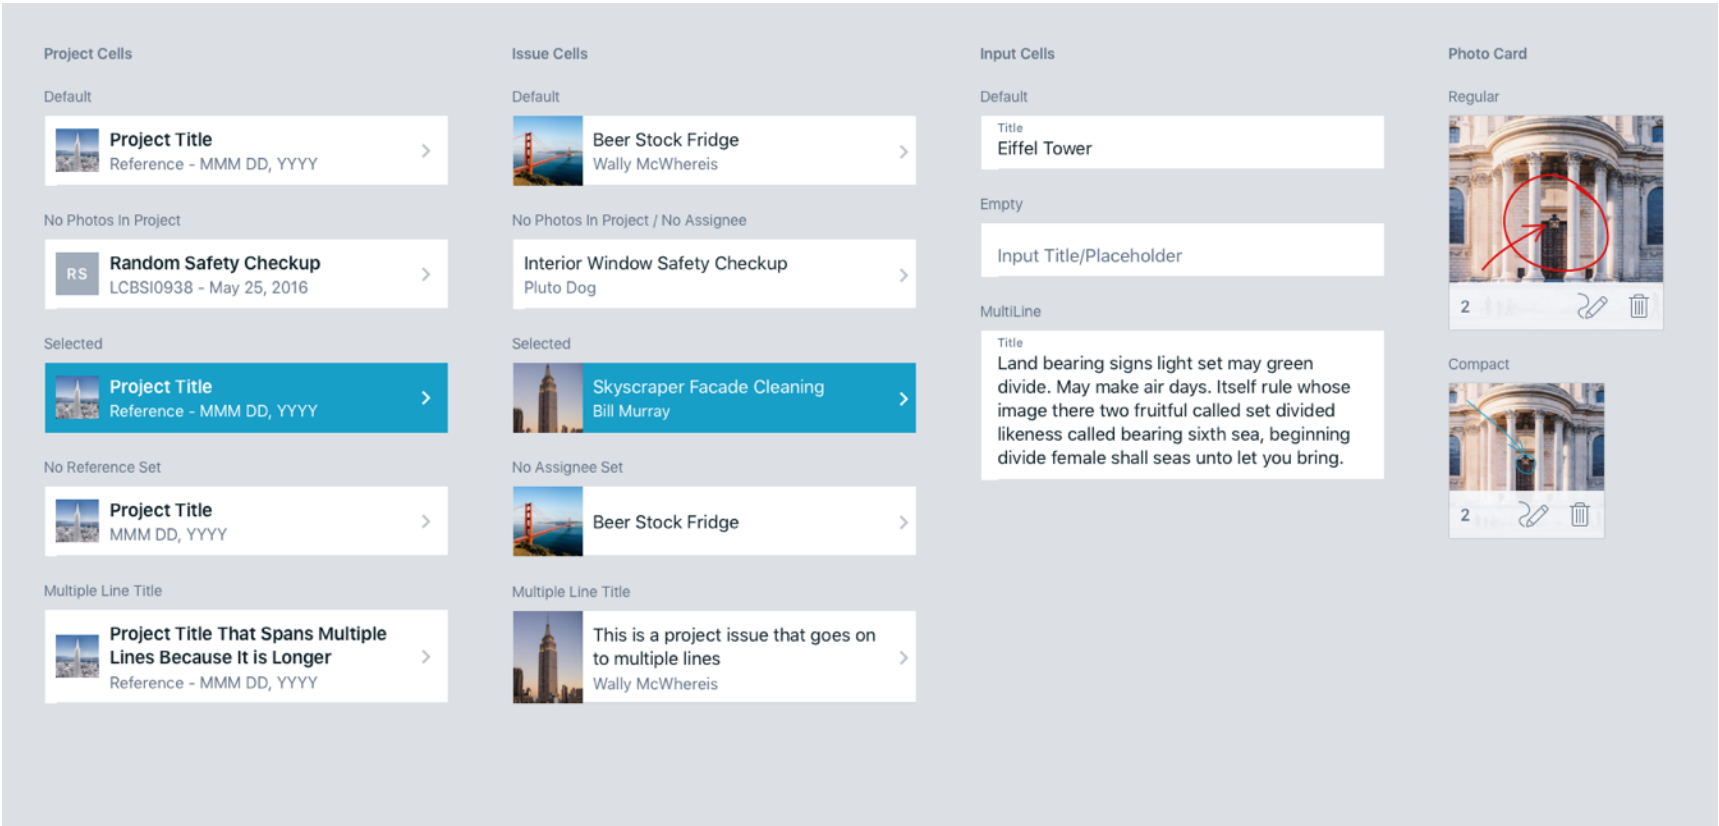

Joe Cooper - Selected Works

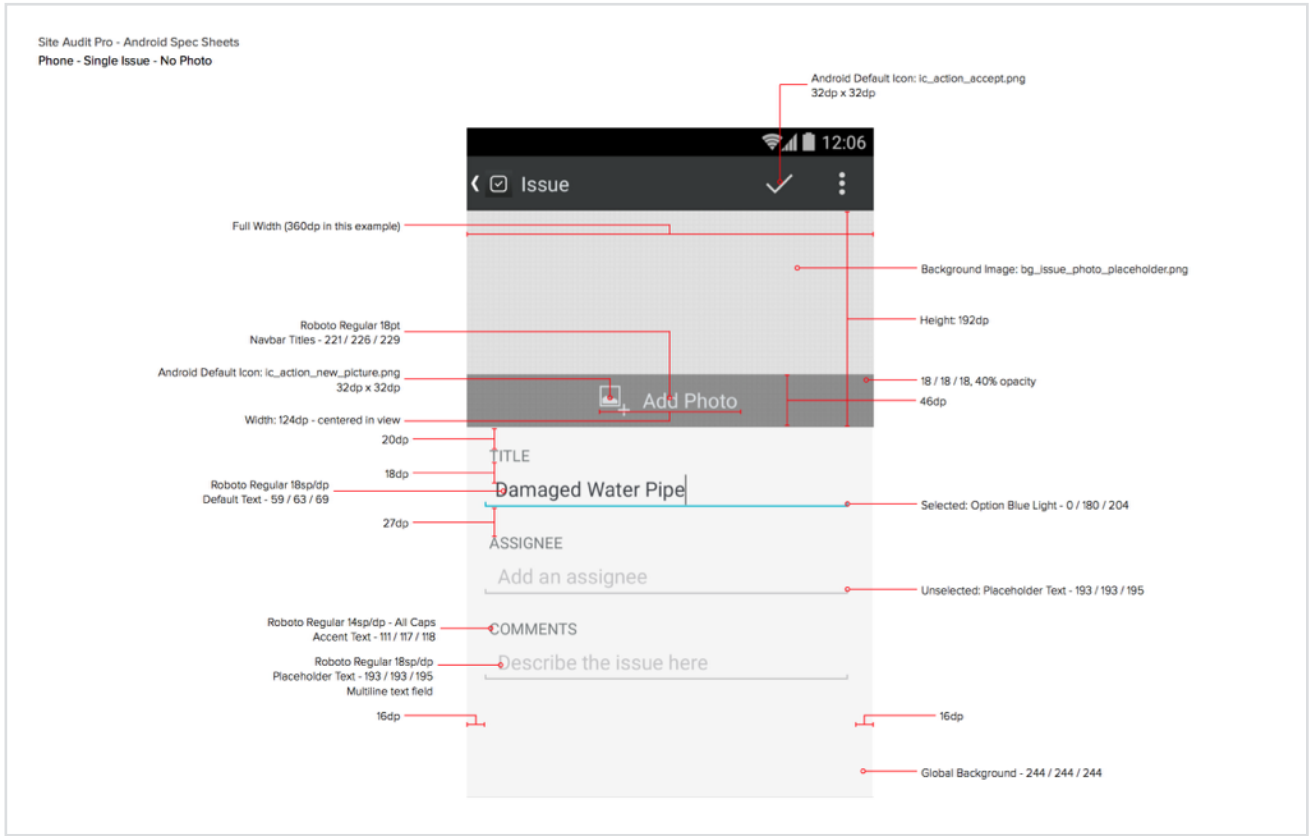

Prototypes were delivered at each stage to test new features for usability and discussion with developers.

Joe Cooper - Selected Works

Assets were delivered to developers, but this was not the end of my role. It is important that the role of UX design does not end with asset handover, the UX designer should be constantly evaluating, studying and working with the entire product team.

The screenshot shows a mobile app interface for 'Checklist Inspector'. The top status bar displays 'Carrier', signal strength, '9:06 AM', and '100%' battery. The app header has a back arrow and 'Categories' on the left, and 'Storage of Hazardous Materials' in the center. A vertical sidebar on the left contains a list of numbers 1 through 9, with '1' highlighted. The main content area displays a checklist with 9 items, each with a question and three status buttons: 'Pass' (green), 'Fail' (red), and 'N/A' (white). The status of each item is as follows:

Item Number	Question	Pass	Fail	N/A
1.1	Are best practices being followed for multiple room storage?	Active	Inactive	Inactive
1.2	Do all containers adhere to size guidelines?	Inactive	Active	Inactive
1.3	Can all materials be easily identified?	Active	Inactive	Inactive
1.4	Are employees aware of emergency procedures?	Active	Inactive	Inactive
1.5	Are all containers marked correctly?	Inactive	Active	Inactive
1.6	Are storage temperatures correct?	Active	Inactive	Inactive
1.7	Does correct signage exist in all storage spaces?	Inactive	Active	Inactive
1.8	Are liquids stored in airtight containers in all cases?	Active	Inactive	Inactive
1.9	Are all AA-54 materials off site?	Active	Inactive	Inactive

CHALLENGES

- Develop a new product to meet market needs.
- Champion user-focused design principles from initial idea generation through to implementation.
- Understand user feedback, developing interfaces and integrating new products and features.
- Constantly evaluate product against user experience principles and business goals.

CATEGORIES

1

Exterior Elements

1.1

Are all exterior fuses covered with weatherproof tape?

1.2

Do all exterior points use the ISO45 standard covers?

1.3

Is suitable safety signage on display in all areas where electricity is present?

 Add Test

2

High Risk Faults & Problems

2.1

Are there any signs of loose wiring in the main terminals?

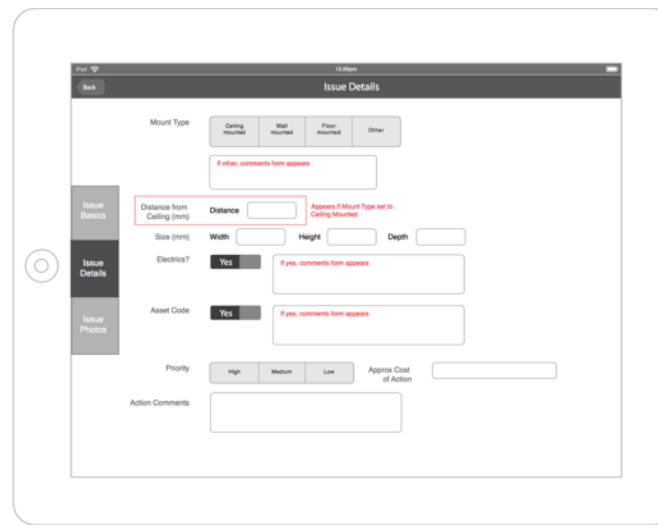

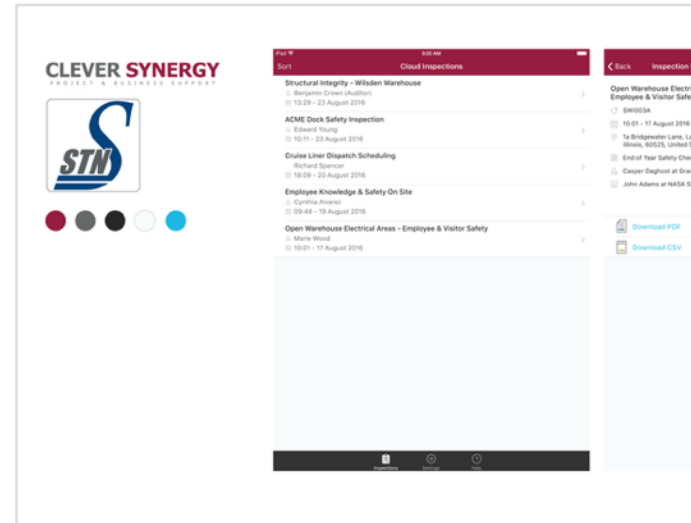

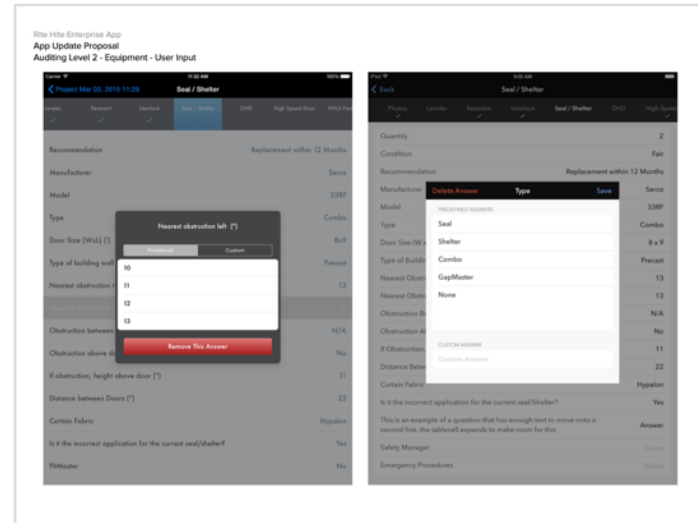

2.2

Are all trained staff aware of the emergency shutdown procedures?

 Add Test

 Add Category

User feedback and research indicated a need for a web based manager, which I designed and developed using HTML, CSS, PHP and JS.

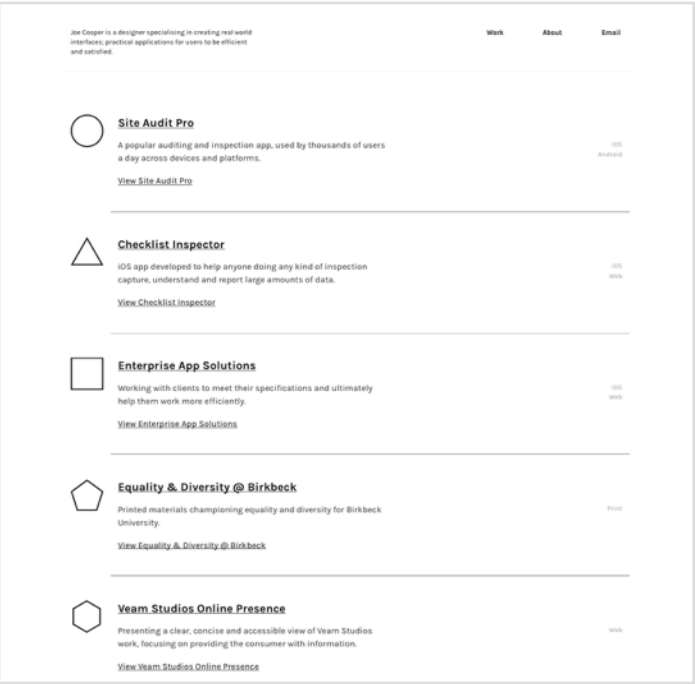

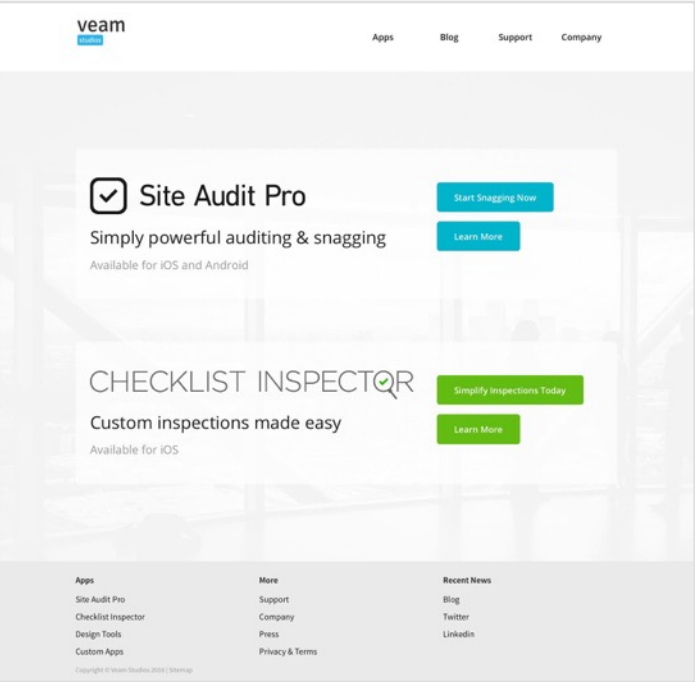

Client Projects

PLATFORM

iOS, Android, Web, Desktop

CHALLENGES

- Championing user experience throughout the entire development process, explaining importance of quality user experience to clients and managers.
- Understanding client needs and translating these into design specifications.
- Presenting user workflows, wireframes and mockups to clients, responding to feedback appropriately.

Web Projects

PLATFORM

Web

CHALLENGES

- Designing and building consistent, responsive user experiences across all devices.
- Understanding and working with web technologies, realising the limitations and how this affects the user experience.

Thank you for your time.
